**Subject:** Tijuana River Notification  
**Attachments:** CollectorOrienteMarch29Repair.docx

All,

Mexican Section of the IBWC advised this morning that CESPT is working on excavation of the Collector Oriente immediately downstream of the area that was repaired during the February 2017 spill. They are concerned that further collapse may cause uncontrolled spill to the river system.

Both Sections are working to assist CESPT in securing bypass pumps for the completion of the work.

According to the Mexican Section of the IBWC, no wastewater from this excavation work has reached the river system in central Tijuana.

Pump Station CILA continues to operate with 2 pumps running.

The following news article was forwarded by our El Paso office. Attached is English translation.
